

Features

- Purity : 99.999%
- Physical state : Gas (liquefied gas)
- Appearance : Compressed liquefied gas in high-pressure gas cylinder
- Boiling point : -112 °C
- Melting point : -185 °C
- Vapor pressure : 4080 kPa (-10 °C)

Applications

- Specialty gas as an agent for Chemical Vapor Deposition(CVD) in semiconductor, LCD and Solar industries

Customers

- Mitsui mono silane has been widely used among global leading semiconductor companies and Solar companies for decades
